Detailed Action

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: With respect to claim 1, the closest prior art to Takada does not teach that the two reactor chambers are sealed off from each other. In particular, Takada describes the shield plate (10) apertures (11) as having an open space of between 0.2-5mm providing fluid communication between chambers (A) and (B). Having the open space is critical for preventing undesirable contact between a reactor tube and the shield plate so as to avoid abrasion due to frequent expansion/contraction. Therefore, there is no motivation to provide a reactor tube with groove as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
